

FCL CUSTOM SEED / FORAGE BLENDS

Your member Mike Baker needs a custom forage blend. You want to order it from FCL using an PO eOrder. A custom forage blend isn't an item you can import from CRS Hub, so you won't be able to eOrder it (only mapped items can be eOrdered); all you can eOrder are the individual mapped seed items that make up the forage blend.

This process was designed to get your blended forage order processed by the mainframe and keep your Inventory Position in agrē accurate.

What you'll find:

Setup: Blended Forage Item	2
Adding the PO eOrder	4
	_
Receiving the Blended Seed	6

Setup: Blended Forage Item

Add a new retail-managed item (unmapped) for the blended forage seed.

On the *Product tab* check the following box:

☑ Omit From FCL PO eOrder Transmission

because the blended forage seed item is not mapped, it technically can't be eOrdered – checking this box tells agrē to omit this product when it sends the eOrder to CRS Hub

Tip Create the new forage blend item by copying an existing seed item that has a similar setup.

On the *Associated Products* tab, add the mapped seed items that make up the grower's forage blend. For this example, the custom forage blend contains 50% Bromegrass, 25% Canary Grass, and 25% Timothy.

Check the associated products as **Mandatory** if you want to save a step and have them added automatically to the PO every time.

Remember to also add either (3080108) CUSTOM BLEND FEE-PER BAG (PICK) or (3080090) CUSTOM BLEND FEE PER BAG B-Y as an associated product – these are the items that tell the eOrder system that you are ordering forage blend, not individual seed items. For this example, each bag holds 22.7 kg of seed, so you'll need 0.044053 bags/kg.

As this is a blended seed item, there's a bit more you need to tell agrē.

el	Order Automatically close Associated Product Line	es on FC	L PO eOi	rder							

In the *eOrder* section check the following box:

Automatically close Associated Product lines on FCL PO eOrder

because you don't want to "double up" the amount reported on order by having both - the forage blend *and* the seed products that make up the forage blend - active on a PO, checking this box tells your agrē database not to count them twice which keeps your Inventory Position Report accurate (don't worry that the associated seed items won't get eOrdered if the product line is closed, the FCL mainframe ignores agrē's line status)

Adding the PO eOrder

Add a PO for *the* FCL supplier and fill in the required eOrder information on the *General tab*.

	if prompted, add all the
	4 associated products selected Select All Des associated products

On the *Products tab*, add the forage blend item. If prompted, add all the *Associated Products*.

If you flagged the Associated Products as "Mandatory" they will be added automatically - you won't need to select them.

The associated seed products (the items that make up the forage blend) are added to the PO with a status of "Closed" so the quantity on order in agrē is not doubled up (counted once for the forage blend item and again for the ingredient seed items). This keeps your *Inventory Position* report accurate.

Because the eOrder system can handle only whole numbers (no decimals), the quantity requested of each associated product has been rounded.

Save and Send the eOrder.

Your *Inventory Position Report* shows what you have on order: just the forage blend, but not any of the blended ingredient seed items.

Receiving the Blended Seed

When the forage blend arrives, enter an *Inventory Receipt* to record receipt of the item.
